

Laser Pump Chamber

Single or dual lamp high-efficiency laser pump chambers can accommodate laser rods of 3 to 8mm in diameter and up to 180mm in length.

A laser pump chamber consists of

- Stainless steel or non-metal body
- Gold-coated elliptical or alumina diffuse reflector
- Series or parallel cooling path
- High UV absorbing flow tubes
- Crystal & lamp waterjackets
- Parallel lamp trigger connector
- Coolant fitting
- O-rings
- Lamp (option)
- Laser rod (option)

Note:

1. External mechanical dimensions can be changed to meet customer's exact requirements;
2. Laser rods customized to your exact requirements available upon request.
